📅 2002

## Profile

I'm an IT student currently studying for a master's degree. I've primarily worked on backend development in Python, but I'm now expanding into frontend with JavaScript and React to build full-stack skills. I spent a year developing software for various projects in a company setting, and I'm also finishing a game built with Godot.

My studies gave me knowledge in system administration, computer networks, virtualization, and database management. I gained hands-on experience with technologies across different layers of software systems — from managing servers and configuring networks to designing database schemas and improving performance. I've also worked with programming languages like C++ and Java, which helped me develop structured thinking and learn the basics of object-oriented design.

## Professional Experience

06/2024 – 02/2025  
Vyškov

**Elekon s.r.o.** ↗

Junior software developer

Implemented software for station information displays and system integration across various communication protocols. Developed interfaces for hardware sensors and I/O modules to ensure reliable operation of connected devices.

02/2025 – Present  
remote

**Troglodyte Studio** ↗

Junior game developer

Developed a card-based game in Godot Engine combining space exploration, survival, and strategy. Designed gameplay systems for ship building, combat, and planetary colonization, focusing on balance and player progression.

## Education

09/2022 – 06/2025  
Brno

**Bachelor's degree in Administration IS/ICT**

Mendel University ↗

09/2025 – Present  
Brno

**Master's degree in Open Informatics-Data analysis and machine learning**

Mendel University ↗

## Skills

### Python

Flask

FastAPI

### SQL

MySQL

### NoSQL

MongoDB

### Javascript

ReactJS

### OS administration

Windows

Linux

### Networks

Cisco

Mikrotik

### Docker

### Godot

## Projects

### **Application for automated theorem proving** ↗

An educational app designed to help students better understand and practice the resolution method in propositional logic.

### **Happies Doomsday** ↗

Space exploration card game, made with Godot(coming soon).

### **Chemical Substance Management System** ↗

A web app for managing and storing data on chemical substances in hospitals.
